Teaching in the Flat World: Learning from High-Performing Systems By Linda Darling-Hammond, Robert Rothman

Teaching in the Flat World will help school systems improve their teacher workforce by drawing important lessons from nations with high-performing educational systems, as well as from successful state experiments in the United States. The authors examine common features and differences in the approaches of high-performing systems that made education a top priority and developed high-leverage strategies to meet their goals. Their varied solutions offer valuable ideas for how to create a strong teacher and school administrator corps from recruitment and preparation through induction, professional development, evaluation, and career advancement into leadership roles. Chapters focusing on systems in Finland, Ontario, and Singapore are coauthored by local scholars with extensive knowledge of the history and current status of policy and practice in their nation. A final chapter highlights attributes that are absolutely necessary for any education system to flourish. The book will be useful to policymakers, practitioners, and researchers interested in strengthening the quality of teaching.

“Proposes a systemic and comprehensive approach to put flesh on the American dream of a high-quality, excellent education for students of all backgrounds. School systems, colleges of education, and policymakers can all learn from these approaches.”

—**Sonia Nieto**, Professor Emerita, Language, Literacy and Culture College of Education, University of Massachusetts, Amherst

“I do not believe that other nations have smarter students than we do. But it is clear that some nations have better systems of education than we do. This book is filled with ideas that will change that!”

—**David Berliner**, author of *50 Myths and Lies That Threaten America's Public Schools*

“*Teaching in the Flat World* is without a doubt the best single collection you will

find on the topic of improving the teaching profession. It's got everything, including six great lessons from successful systems that you will not want to miss.”

—**Michael Fullan**, Professor Emeritus, OISE, University of Toronto
